EDUCATION

University of Illinois Urbana-Champaign, IL

Expected 2028

Bachelor of Science, Aerospace Engineering, 3.7 GPA

Relevant Coursework: Mechanics of Aerospace Structures, Thermodynamics, Astrophysics

University of Minnesota Twin Cities, MN

September 2023 - May 2025

Dual Enrollment, Aerospace Engineering, 3.5 GPA

Relevant Coursework: Statics, Dynamics, Flight Mechanics

PROJECT EXPERIENCE

AeroDesignX, St. Paul, MN

June 2026 – Present

Independent Developer

- Developed an automated parametric aircraft design workflow using Python and CadQuery, generating connected 3D aircraft assemblies and validated STEP/STL files for SolidWorks and downstream analysis.
- Implemented geometry and export validation checks to detect disconnected components, troubleshoot CAD failures, and produce CFD-ready models.
- Developed a Python aircraft design tool that evaluates mission requirements and compares design alternatives using aerodynamic, performance, and configuration data.

Illinois Space Society, Champaign, IL

August 2025 – May 2026

Launch Operations & Structures Team Member

- Fabricated rocket airframe assemblies using aerospace-grade epoxy and structural fillets while controlling material placement, joint quality, and component alignment.
- Inspected fin and motor-mount interfaces to identify alignment and bonding risks before flight, contributing to zero fin separation events.

UAV@Illinois, Champaign, IL

December 2025 - Present

Founder

- Led the design, assembly, and testing of FPV racing drones by coordinating airframe, propulsion, flight-control, and video-system integration.
- Standardized component selection, airframe layout, assembly, and functional testing into a repeatable design-build-test process.
- Assembled and inspected flight hardware by soldering flight controllers, ESCs, and video transmitters and troubleshooting mechanical and electrical integration issues.

Midwest Nice Research Group, Champaign, IL

January 2026 – May 2026

Undergraduate Research Assistant

- Collected, organized, and analyzed aircraft data to create repeatable computational inputs and communicate performance results for engineering decisions.
- Developed and tested a Python performance model covering climb, cruise, descent, and reserves to estimate aircraft range, fuel burn, and payload capability.

SKILLS

Programming languages: Python, Java

Engineering Software: Siemens NX, SolidWorks, ANSYS CFD, CadQuery, RASAero, OpenRocket, MATLAB
